

Design Technology Transition Activity 2020

THE PROBLEM

We need to reduce the amount of waste that we send to landfill sites, otherwise this picture below is what a lot of the world will start to look like.

THE SOLUTION

You need to **create a new product from a waste material**, considering the impact on the environment and using the 6 R's Reduce, Reuse, Recycle, Repair, Refuse and Rethink.

It can be anything at all, it just needs to be made from something that would otherwise get thrown away.

EXAMPLES

UPCYCLED OLD BOOTS PLANTER
